

SOCIETY 1: PROGRAMMING

SOCIETY STRUCTURE

President

- Manages developer resources, and liaises with the other two society presidents.

General Secretary

- Manages documentation, version control (Git repositories), and project archives.

Vice President

- Coordinate with CCA

Project Managers

- Team leads for individual projects.

Specialist Leads

- Senior students with deep knowledge (e.g., "Lead NLP Engineer," "Lead CV Specialist," "Lead Data Scientist"). They mentor developers.

Guild Developers

- The Executive members who write code, train models, and build the solutions.

MEMBERSHIP POLICY

Rule 1:

Rule 2: Portfolio-based. Applicants submit links to their GitHub, past projects, or relevant coursework.

Rule 3: Membership is project-based. Members join to contribute to a specific project and are expected to meet deadlines.

LEADERSHIP SELECTION

- **Portfolio Review:** Candidates for leadership must present a portfolio of 1-2 completed projects.
- **Management Interview:** President and VP (Projects) will ask questions that focus on team management, conflict resolution

SOCIETY 3: COUNSELLING

SOCIETY STRUCTURE

President

- Manages external relationships, finds "clients" (businesses, other university departments, NGOs), and sets the group's strategic direction.

General Secretary

- Manages all client communications, schedules discovery meetings, and prepares final reports.

Vice President

- Coordinate with CCA

Consulting Analysts

- Leads for individual "client" engagements. They manage the relationship and are responsible for the final proposal.

Executive Members

MEMBERSHIP POLICY

- **Open to All Fields:** Actively recruits from Business, Humanities, Law, and Medicine (in addition to tech).

LEADERSHIP SELECTION

- **Case Interview:** All leadership candidates must perform a full case study interview, from problem discovery to final presentation.
- **Presentation Skills:** Must demonstrate exceptional public speaking and presentation design skills.

How All Three Societies Coordinate (The "AI Club Ecosystem")

This is the most important part. They function as a single, powerful "ecosystem."

The Central Workflow: The Project Pipeline

1. Talent Sourcing (Academy -> Guild):

- The **Teaching Society** is the "freshman" class. It trains students from zero.
- The top graduates from the Academy are recruited to become junior developers in the **Programming Society**.
- The Academy's curriculum is directly influenced by the Guild. If the Guild needs more web developers (e.g., for Streamlit/Gradio), it tells the Academy to add a workshop on it.

2. Project Sourcing (Consulting -> Guild):

- The **Counselling Society** is the "client-facing" arm. They go out into the "real world" and find problems to solve.
- They "diagnose" the problem and create a technical "Project Brief."
- This brief is the main source of projects for the **Programming Society**. This ensures the Guild is working on real problems for real people, not just theoretical class projects

3. The Complete Loop (A Practical Example):
