

1. Purpose and Need

- Medical students are entering an era where **AI will diagnose, treat, and assist**.
- Traditional computer science teaching is **not aligned** with how medical minds think.
- **Customized programming education can unlock potential** in medical students.
- Students interested in **AI in Healthcare, Robotics Surgery, Virtual Agents, Agentic AI, and Bioinformatics** should have a **home to learn, discuss, and grow**.

2. Name of Society

Robotics and AI Society (RAIS)

3. Vision of the Society

"To empower medical students with programming and AI skills, bridging the gap between healthcare and technology, and preparing them for the future of medicine driven by Artificial Intelligence and Agentic AI."

4. Activities of the Society

- **Weekly Learning Sessions:**
Basics of Python, JavaScript, Data Science, AI, and Agentic AI explained **specially for medical students**.
- **Hands-on Projects:**
Small AI projects like: Predicting diseases, Chatbots for patients, Robotic surgical assistants.
- **Presentation Assignments:**
Students present topics like "AI in Cancer Diagnosis", "Robotic

Surgeries", "How ChatGPT Works", etc.

(This builds **confidence**, **deep thinking**, and **research skills**.)

- **Workshops and Certifications:**

Bring guest speakers, workshops, and create opportunities for students to **get certified**.

- **Competitions:**

Coding contests, AI idea pitches, and prototype challenges.

5. Selection Policy (No Politics Rule)

- **Merit-based Leadership:**

Every President, General Secretary, and Officer will be selected after a **transparent, fair test and interview** based on:

- AI concepts
- Programming knowledge
- Leadership ability

- No favoritism, no politics.

This society is for **pure learners and passionate doers** only.

6. Industrial-Level Teaching Goal

- You aim to **match international industry standards** in teaching.
- Focus on **real-world problem-solving** rather than just theory.
- Students will be trained enough to **intern with companies** or **build startups** by the end of their degrees.
